

What is claimed is:

1. A shaving apparatus, comprising:
  - a base having a first side and a second side, the second side of the base including connectors for selectively attaching the shaving apparatus to a handle;
  - a razor cartridge mounted to the first side of the base;
  - a shaving aid dispensing device that includes at least one reservoir defined by an inner wall and an outer wall, wherein the inner wall further defines an aperture for passing the razor cartridge therethrough;
  - a storage medium disposed in the reservoir, for storing a non-solid shaving aid material; and
  - a wick substantially covering the reservoir, wherein the wick is operable to draw shaving aid material from the storage medium by capillary action.
2. The shaving apparatus of claim 1, wherein the base is comprised of at least two separate elements.
3. The shaving apparatus of claim 1 having at least two reservoirs, wherein the reservoirs are separated by reservoir walls.
4. The shaving apparatus of claim 1 wherein the storage medium substantially fills the reservoir.
5. The shaving apparatus of claim 4 wherein the storage medium is in contact with an inner surface of the wick.
6. The shaving apparatus of claim 5 wherein the storage medium comprises a fibrous material.
7. The shaving apparatus of claim 6 wherein the storage medium comprises an extruded fiber.
8. The shaving apparatus of claim 6 wherein the storage medium comprises a spun fiber.

9. The shaving apparatus of claim 1 wherein the wick is moldable.
10. The shaving apparatus of claim 1 wherein the razor cartridge is selectively attachable to the base.
11. A shaving apparatus, comprising:
- a base;
  - a razor cartridge attached to the base;
  - a shaving aid dispensing device that includes an annular shaped reservoir and an aperture;
  - a storage medium disposed in the reservoir, for storing a non-solid shaving aid material; and
  - a wick substantially covering the reservoir, wherein the wick is operable to draw shaving aid material from the storage medium by capillary action.
12. A shaving apparatus, comprising:
- a handle having a self-leveling mechanism that is normally operable to adjust the position of a first element relative to a second element, wherein movement of the first element in a first direction causes the second element to move in a second direction substantially opposite the first direction; and
  - a replacement cartridge selectively attached to the handle, the replacement cartridge having a razor cartridge and a device for dispensing a non-solid shaving aid material, wherein the replacement cartridge attaches to the handle in such a manner that the self-leveling mechanism is not operable to adjust the movement of the first element relative to the second element.

13. The shaving apparatus of claim 12, wherein the replacement cartridge selectively attached to the handle comprises:

a base having a first side and a second side, the second side of the base including connectors for selectively attaching the base to the handle;

wherein the razor cartridge is attached to the base; and

wherein the dispensing device is attached to the base, and the dispensing device includes at least one reservoir defined by an inner wall and an outer wall, wherein the inner wall further defines an aperture for receiving the razor cartridge, a storage medium disposed in the reservoir for storing a non-solid shaving aid material, and a wick substantially covering the reservoir, wherein the wick is operable to draw shaving aid material from the storage medium by capillary action.

14. The shaving apparatus of claim 13 wherein the dispensing device includes at least two reservoirs, wherein the reservoirs are separated by reservoir walls.

15. The shaving apparatus of claim 13 wherein the storage medium substantially fills the reservoir.

16. The shaving apparatus of claim 15 wherein the storage medium is in contact with an inner surface of the wick.

17. The shaving apparatus of claim 16 wherein the storage medium comprises a fibrous material.

18. The shaving apparatus of claim 17 wherein the storage medium comprises an extruded fiber.

19. The shaving apparatus of claim 17 wherein the storage medium comprises a spun fiber.

20. The shaving apparatus of claim 13 wherein the wick is moldable.

21. The shaving apparatus of claim 13, wherein the dispensing device is incorporated with a base that selectively attaches to the handle.

22. The shaving apparatus of claim 21, wherein the dispensing device includes at least one reservoir defined by an inner wall and an outer wall, and the inner wall defines an aperture for receiving the razor cartridge.
